Manager's Commentary - Of Bear Market Rallies and V shaped Bottoms

The MSCI Arabian markets index rose 15.2% in April, finally turning positive for the year, albeit a marginal 2.2%. Within markets, Egypt was the star performer, up 23.8%, closely followed by Saudi Arabia with 19.6%. For the year, Saudi Arabia and Tunisia are now the best performing markets, both up over 17%.

During the month, corporate earnings for the quarter were broadly in line with expectations. Banks generally reported results that were on the weaker side, particularly with regards to balance sheet growth. For the top 10 banks (by market cap) in the region with details out so far, Net Loans are down 1% sequentially, while balance sheet size has fallen 1.5% for the quarter. For real estate companies, Emaar reported numbers that indicated the weakness of the underlying business. This was evident all the way from the revenue line down to net profit for the quarter. Across in Abu Dhabi, Aldar reported similar results, though the bottom line was boosted by valuation gains on investment properties. At the operating level, Aldar hardly made any money (AED14 million on almost AED 600 million of revenues) and a bit worryingly, spent at a blazing pace on existing projects, spending over AED 5 billion during the quarter alone. The strategy between the two companies could not be more different; Aldar is fairly liquid and is spending aggressively, with nothing to show yet in the operating column. Emaar on the other hand is in a conservative mode, looking to find out ways to ride out the current phase in its business.

In Saudi Arabia, Sabic produced a stunner for the quarter, reporting a loss of SAR 974 million for the quarter, on the back of a SAR 1.2 billion good will write down related to their plastics business. Excluding the write down, net profit would have been SAR207 million for the period; accounting for Sabic's share of Saudi Fertilizer's profit of SAR 525 million (SAR 225.6 million for Sabic) for the quarter implies that as a whole, Sabic's operating profit was about zero, undoubtedly due to the negative contribution of the plastics division. The woes of the auto industry globally hit the plastics business hard, and it is difficult to see this business bottoming quickly. Earnings for Sabic will continue to be impacted by both the operating performance of plastics, as well as probable good will write downs related to the business.

Despite the shock value of Sabic's earnings, operating performance for the region's corporates has been as expected. Market reaction to the same however may have caught some investors by surprise. Market strength (although over a very small period of time) in the face of weak operating performance may be perplexing to some, but makes perfect sense. Correlation between earnings and price performance in the short run is very low, and a

similar relationship (basically none!) holds between capital market returns and GDP growth numbers over the short term. Counter trend bear market rallies tend to be quick, and large. Investors should be clear that the entire region has been in a bear market since about late 2005-for an emerging market this is a pretty long bear, now almost 4 years and counting. The level of recent volatility, the almost universal sense of doom regarding the region's economic prospects, and reluctance of professional investors to participate (as evidenced by most regional funds having high cash and fixed income allocations) would suggest that the process of finding a bottom for this great bear market has started.

The above certainly does not mean that we have already witnessed the absolute bottom, though it is possible. What it does mean is that investors should start scaling back into risk assets. Typically, such counter trend rallies ultimately do run out of steam, and even if the ultimate bottom is already in place, investors will still do well to start putting on risk trades now rather than later. As long as there is significant skepticism about the sustainability of this run, the rally will most likely continue. The moment there is widespread belief that the economies have turned the corner and all is well will probably signal the time to lighten up. That this pattern will hold is the odds on bet, but far from certain. Hence investors will be well served by remaining cautious, scaling in gradually, and sticking to fundamentally sound names. Even though they may miss out on the dramatic advances by the more speculative names, they will still end up participating fairly well as long as they have some risk in their portfolios.

One interesting disclosure during the month was Tamweel's announcement of its 2008 performance. The figures are eerie, as if from another era almost. However they do provide a small indication of some of the challenges that the economy is likely to face. During the second and third quarters of last year, which probably heralded the period of maximum strength in the local real estate sector, Tamweel added almost AED 5 billion of mortgages (its loan book doubled in those two quarters) so that it ultimately ended the year just shy of AED 11 billion in mortgages after a quiet last quarter. Since most of these are new mortgages where the underlying collateral is yet to be handed over, the level of provisioning is miniscule; as of December, Tamweel had less than 85 bps of provisioning against its entire loan book. It is safe to assume that the ultimate level of provisioning required against at least the assets booked in the second and third quarters of last year (remember the 97% financing offers?) will be significantly above 85 bps. The good news from all of this was that according to news services Tamweel and Amlak's merger is likely to be finalized soon. Any such merger deal will need to address

the issue of recapitalizing the companies, and providing a sustainable source of funding. Converting the merged entity into a full service bank is being suggested as a potential solution, though it will still require recapitalizing the entity.

The bigger challenge for real estate in at least Dubai is end user demand. There is no doubt that the private sector in the entire region is in retreat, with the public sector aggressively attempting to pick up the slack. That economic activity is weak is evidenced by rapidly falling inflation across the region, not only for commodities and food, but more or less across the board now. Inflation penalizes lenders at the expense of borrowers; in a disinflationary environment, borrowers struggle to repay debt that is not declining in real terms. With regional economies likely to remain weak for the balance of the year, the outlook for Dubai's real estate sector does not

appear bright since the emirate's economy is among the more exposed to regional and global growth due to the dominance of leisure, real estate, and financial services in the economy.

Corporate earnings are not likely to provide much to cheer investors in the near term. Capital markets will remain volatile as investors take their cue from random variables (like the return of the S&P 500 Index from the day before!) with limited relevance for the region. A strategy of gradually adding risk to portfolios, while focusing on fundamentally sound names, will pay rich dividends over the long run. As yet, it is not the time to be adventurous.

Performance Chart

Fund Strategy

Makaseb Arab Tigers Fund (MATF) aims to achieve long term capital appreciation through investing mainly in shares of companies listed on the Stock Exchanges of the Middle East and North Africa region.

- The Fund earned 9.6% during the month while the benchmark MSCI Arabian Market Index earned 15.2% in the same period.
- Asset allocation dampened portfolio performance due to limited exposure to Banks and Commodity Chemicals. In particular benchmark heavy weights like Al Rajhi Bank and Saudi Basic Industries – though being part of the portfolio – are responsible for bulk of the performance gap.
- Stock selection again continued to have positive contribution to overall portfolio performance. We were able to pick winners in Financials, Industrials and Utilities that helped support portfolio performance and contributed significantly to April return.

Performance Chart

Fund Strategy

Makaseb Emirates Opportunities Fund (MEOF) aims to achieve long term capital appreciation through investment primarily in shares listed on the UAE stock exchanges by using a dynamic asset allocation strategy. The MEOF portfolio is constructed after careful evaluation of market factors including liquidity and price action to determine the optimum market exposure. The monitoring and adjustment of market exposure is dynamic, in order to take into account changing market dynamics.

- MEOF gained 4.4% during the month whereas the benchmark MSCI UAE Index (MXAED Index) lost 1.3%.
- Asset Allocation contributed to the relative out performance of the fund. Our overweight position in Diversified Financials and Capital Goods and underweight position in Telecommunication Services generated alpha.
- Security Selection due to our overweight position in Air Arabia and IAIC detracted performance. However, DFM and Arabtec had a net favourable impact on portfolio's return.

Performance Chart

Fund Strategy

Makaseb Income Fund (MIF) primarily seeks to provide current income along with the stability of capital. Fund's secondary objective is to seek income growth over the long term. The Fund aims to achieve its investment objective by investing in a diversified

- The fund gained 3.5% during the month as the regional fixed income market rebounded.
- High Grade Issues outperformed lower rated issues, hence issuer selection was key to performance.
 - Another key to performance was the allocation to the industrial sector which fared better than the financials.

Performance Chart

Fund Strategy

The investment objective of the Portfolio is to seek long term capital appreciation through investments made primarily in equities of companies that are listed on Recognized Markets in the Middle East and North Africa ("MENA") region.

- The Fund earned a return of 2.1% during the month while the benchmark MSCI Arabian Markets Index earned a return of 14.7%
- Bulk of the under performance was the result of asset allocation. Particularly our absence from Saudi Arabia significantly eroded relative performance
- Stock selection in Qatar worked to our advantage while exposure to UAE also contributed to portfolio returns.
